Overview of CoPs/Digital Habitats for UN SDGs

Community Orientation & Research

We engaged with the Regina Humane Society as a core Community of Practice (CoP), which focuses on animal welfare and education.

Through interviews and feedback from client Rebecca, we identified a lack of engaging, child-friendly tools that help kids learn how to interact safely with pets.

Technology Configuration Inventory

- Most educational programs were offline (classroom-based presentations or printed brochures). Few digital tools existed, and none provided interactive gamified learning.

Zoe & Molly Online

Gap Identified:

- No existing interactive games teaching animal safety for kids in our local community.

What We Did:

- Created a browser-based educational game.
- Embedded real-life animal interaction scenarios.
- Made it visually engaging and kid-friendly.
- Integrated feedback and quiz mechanics for retention.

What's Unique:

- Combines storytelling and gamification.
- Uses behavioral animations to simulate pet responses.
- Offers a learning resource that schools and humane societies can embed in curriculum or outreach

Why: Children often misinterpret animal behavior, which can lead to injuries or mistreatment. We aimed to reduce these incidents through an educational digital tool that uses play as a learning method.

How:

- Collaborated with RHS and used feedback from educators.
- Designed scenarios that mirror common real-life situations.
- Used an iterative feedback process to refine game mechanics.

What:

- Game title: *PetCuesGame* Core Mechanics: Interactive story-driven scenarios, branching choices, pet behavior simulation, audio-visual cues

Technology Stack:

- **Godot Engine (4.2):** Open-source game development platform
- **GDScript:** For scripting pet behaviors and dialogues
- **GIMP/Inkscape:** For creating 2D assets
- **Custom Tools:** Dialogue system, quiz engine

Pros:

- Lightweight and fast development
- Easy to export and test for multiple platforms
- Scene-based structure allowed modular content

Cons:

- Learning curve with animation syncing
- Limited time for polishing advanced UI/UX interactions

Project Demo

Lecture Concepts Applied:

- CoPs & Digital Habitats: Integrated community needs into design.
- Technology Stewardship: Matched tech choice with capacity and deployment needs.
- Emergent Design: Adjusted based on feedback from the community and client.

Reflection:

- **Success:** Achieved our core goal: a functional, engaging game tailored for community use.
- **Likes:** Creative design process, meaningful impact, collaboration with real-world clients
- **Dislikes:** Time constraints limited scope of features
- **Proud of:** Building something the community can use and improve upon
- **Learned:** Realized the importance of aligning tech development with user needs
- **Going Forward:** Will apply these skills in future projects involving education, game design, or social innovation

Future Work:

- Add more animals (cats, rabbits, exotic pets)
- Voiceover narration for accessibility
- Adaptive learning: Levels based on age or learning speed
- Teacher dashboard for student progress tracking

Thank you
